

Goal and Non-Goal

Goal:

- Make it easy for users to sync their code with SnickerSync in GiggleGit.

Non-Goal:

- SnickerSync will not automatically choose or suggest snickers based on your code. Users must manually choose the "snickers" for syncing.

Non-Functional Requirement 1: Who Can Do What?

Functional Requirement 1:

- **PMs can change snicker settings:**
PMs should be able to change the snickers used in syncing. This can only be done by users with the PM role.

Functional Requirement 2:

- **Developers can only see snicker settings:**
Developers should be able to view snicker settings but not change them. They only get read access.

Non-Functional Requirement 2: User Study Grouping

Functional Requirement 1:

- **Randomly place users in groups:**
When users sign up for a study, randomly assign them to either the control group or one of the variant groups.

Functional Requirement 2:

- **Track user data separately for each group:**
Keep track of which group each user is in and make sure we store their actions separately for the study. This helps compare how each group behaves.
